EXAMINER

REFAI, RAMSEY

ART UNIT PAPER NUMBER

2152

DATE MAILED: 11/27/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/811,158

Applicant(s)

SREENIVASAN ET AL.

Examiner

Ramsey Refai

Art Unit

2152

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 26 October 2006.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-17 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-17 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Amendment

Responsive to Request for Continued Examination (RCE) received on October 26, 2006. Claims 1-3, 4, 6, 7, 8, 11, 12, 13, 16, and 17 have been amended. Claims 1-17 are now pending further examination.

Response to Arguments

1. Applicant's arguments with respect have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections – 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

3. Claims 1-17 rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01. Independent claims 1-3 have been newly amended to now recite that *the proposal message and the commit message are both sent by a coordinator node for receipt by each of the plurality of nodes after receiving acknowledgment that the proposal message has reached each node*, however, there is a structural gap between these new limitations and the previous limitations, which were directed to *detecting a failure at a node and transferring applications from the failed node to other nodes* (failover). It is not clear how these new limitations relate to the detection of failure at a node or the transfer of applications from the failed node to other nodes. Claims 4-7, 8-12, and 13-17 depend on the above rejected claims, therefore are rejected under the same rationale as their respective independent claim.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-17 are rejected under 35 U.S.C. 102(e) as being anticipated by Frank et al (U.S. Patent No. 6,532,494).

6. As per claim 1, Frank et al teach a computing system comprising a plurality of nodes connected by a network wherein the plurality of nodes include a group membership service (column 1, lines 30-45, Fig 3, Fig 1; nodes in a cluster group) operable to determine membership of a process executing on a node in the plurality of nodes for an application distributed across two or more of the plurality of nodes said membership communicated between the plurality of nodes in the network (column 4, lines 49-67; distributed application) utilizing a proposal message sent by a coordinator node for receipt by each node in the plurality of nodes and a commit message sent by the coordinator node to each node in the plurality of nodes after receiving acknowledgement that the proposal message has reached each node of the plurality of nodes (column 5, lines 44-62, column 2, lines 5-13; if a node fails to receives heartbeat messages from its previous node, a reconfiguration message is then send by that node to all other nodes; once all other nodes acknowledge their existence in the group, the node membership is once again reconciled), and further wherein the plurality of nodes communicate with each other to detect as failure on a first node of the plurality of nodes and to transfer applications from the first node to

Art Unit: 2152

other nodes of the plurality of nodes on detecting the failure (column 1, lines 30-40, column 2, lines 5-13; failover).

7. As per claims 2 and 3, these claims contain similar limitations as claim 1 above, therefore are rejected under the same rationale.

8. As per claim 4, Frank et al teach wherein the plurality of nodes includes an initiator node to send the proposal message to the coordinator node (column 5, lines 44-62; no ack to heartbeat message sent by the node is received from failed node).

9. As per claim 5, Frank et al teach wherein the coordinator node comprises a longest running node in the plurality of nodes (column 7, lines 21-27).

10. As per claim 6, Frank et al teach wherein the plurality of nodes are arranged in a network ring, the order of the plurality of nodes in the network ring being defined by a cluster membership age of each node in the plurality of nodes and wherein the coordinator node forwards the proposal message to a first node of the plurality of nodes, and wherein the proposal message is forwarded by a receiving node in the network ring to a successor node of the receiving node (Fig 3, column 5, lines 31-43; message are sent in a loop from a previous node to a next node).

11. As per claim 7, Frank et al teach wherein the coordinator node issues the commit message upon receiving the proposal message from a non-initiator node in the network ring (column 5, lines 44-62, column 2, lines 5-13; once other nodes verify group membership by exchange of messages; group membership is reconciled).

12. As per claim 8, Frank et al teach wherein communicating the proposal message includes sending by an initiator node the proposal message to the coordinator node (column 5, lines 44-62; no ack to heartbeat message is received from failed node).

Art Unit: 2152

13. As per claim 9, Frank et al teach wherein the coordinator node comprises a longest running node in the plurality of nodes (column 7, lines 21-27).

14. As per claim 10, Frank et al teach, further comprising:

arranging the plurality of nodes in a network ring; forwarding by the coordinator node the proposal message to a first node of the plurality of nodes; and forwarding by the first node to a next node in the network ring (Fig 3, column 5, lines 31-43; message are sent in a loop from a previous node to a next node).

15. As per claim 11, Frank et al teach wherein the coordinator node issues the commit message upon receiving the proposal message from a non-initiator node in the ring (column 5, lines 44-62, column 2, lines 5-13; once other nodes verify group membership by exchange of messages; group membership is reconciled).

16. As per claim 12, Frank et al teach wherein upon receiving the commit message a node of the plurality of nodes in the network ring performs the tasks of caching the commit message; forwarding the commit message to a next node in the network ring; upon completing forwarding the commit message delivering the commit message to each process of a process group on the node (Fig 3, column 5, lines 31-43; message are sent in a loop from a previous node to a next node. The use of caching is well known when communicating data to another node).

17. As per claim 13, Frank et al teach wherein communicating the proposal message includes sending by an initiator node the proposal message to the coordinator node (column 5, lines 44-62; no ack to heartbeat message is received from failed node).

18. As per claim 14, Frank et al teach wherein the coordinator node comprises a longest running node in the plurality of nodes (column 7, lines 21-27).

19. As per claim 15, Frank et al teach wherein the method further comprises:

Art Unit: 2152

arranging the plurality of nodes in a network ring; forwarding by the coordinator node the proposal message to a first node of the plurality of nodes; and forwarding by the first node to a next node in the network ring (Fig 3, column 5, lines 31-43).

20. As per claim 16, Frank et al teach wherein the coordinator node issues the commit message upon receiving the proposal message from a non-initiator node in the ring (column 5, lines 44-62, column 2, lines 5-13; once other nodes verify group membership by exchange of messages; group membership is reconciled).

21. As per claim 17, Frank et al teach wherein upon receiving the commit message a node of the plurality of nodes in the network ring performs the tasks of:

 caching the commit message; forwarding the commit message to a next node in the network ring; upon forwarding the commit message delivering the commit message to each process of a process group on the node (Fig 3, column 5, lines 31-43; message are sent in a loop from a previous node to a next node. The use of caching is well known when communicating data to another node).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ramsey Refai whose telephone number is (571) 272-3975. The examiner can normally be reached on M-F 8:30 - 5:00 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bunjob Jaroenchonwanit can be reached on (571) 272-3913. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
